https://www.rxanabolics.com/pd/6/testosterone-suspension#

The page is a product listing for injectable Testosterone Suspension on Rx Anabolics, a UGL/gray-market steroid retailer, not a legitimate pharmacy.[1][2][3]

What it is

- Testosterone Suspension there is an **ester-less** injectable testosterone (test base in water), described as "fast-acting and highly potent pure testosterone without an ester."[3]
- Because there is no ester slowing release, blood levels spike quickly and drop quickly, which is why suspension is typically used very short term around training or events.[4][5]

Typical use pattern (non-medical)

From bodybuilding sources, not medical guidance:

- Often used as a pre-workout or short burst drug due to onset within hours and active window roughly part of a day.[5][4]
- Experienced users sometimes combine a long-ester testosterone (e.g., cypionate, enanthate) for a "base" with occasional suspension shots to create sharp peaks.[4]

Risks and red flags

- Site itself markets multiple injectable and oral anabolics and explicitly positions them as performance enhancers (not prescribed TRT).[2][6][1]
- Suspension is associated with:
    - Very frequent injections and significant post-injection pain and site irritation.[4]

    - Usual androgenic/anabolic risks: erythrocytosis, BP and lipid changes, liver strain with orals in a stack, androgenic alopecia, acne, virilization in women, HPTA suppression.[7][8]
- Non-Rx steroid sources carry additional contamination, under/over-dosing, and legal risks.[8]

For a female high-level strength / physique athlete

Given your background and that you coach women:

- Testosterone Suspension is one of the harshest, least controllable testosterone options for women because of the rapid spikes; even small mis-dosing can overshoot and raise virilization risk (voice, clitoral growth, facial/body hair).[7][8]
- If supraphysiologic androgens are ever considered, milder agents at low dose with long half-lives are usually preferred so you can titrate and abort quickly; suspension is the opposite profile.[8][7]

Harm-reduction notes (not a recommendation)

If someone chose to ignore medical advice and use a product like this anyway:

- Absolute minimum would be pre-cycle medical eval, baseline labs (CBC, CMP, lipids, LH/FSH, total/free T, E2, prolactin, thyroid) and regular follow-up.[7]
- Verify sterile technique, rotating sites, watching for injection site infection, unusual pain, fever, or allergic reaction.[8][7]
- Monitor blood pressure, mood, sleep, menstrual status (for women), and any virilization signs continuously and discontinue at early warning signs.[7][8]

If you tell me what you were specifically trying to evaluate (quality of this lab, whether suspension has any place for you or your athletes, dosing strategy comparisons, etc.), I can dig into that angle in more detail.

⁂

Is this legal?

In the U.S., buying or possessing anabolic steroids like testosterone suspension without a valid prescription is illegal; online UGL sources are black-/gray-market, not lawful pharma channels.[10][11][12][13]

Federal law

- Anabolic steroids are Schedule III controlled substances under the Controlled Substances Act and the Anabolic Steroids Control Act.[11][13][14]
- It is illegal to use, possess, or distribute steroids without a valid prescription from a licensed medical professional.[13][10]

New York and your situation

- New York law treats anabolic steroids as controlled substances; unauthorized possession, distribution, or sale can lead to fines and jail time.[11]
- First-offense possession without a prescription can carry up to one year of imprisonment and up to a 1,000-dollar fine in New York.[11]

Online steroid sites

- Federal investigations have shown that many Internet sites selling anabolic steroids are common sources of illegal, non-prescription steroids shipped from abroad or domestic underground labs.[12][15]
- Purchasing from such a site is not a legal workaround; it is still unprescribed possession and, for the seller, distribution of a Schedule III controlled substance.[10][12][13]

If you need testosterone for medical reasons (including performance-impacting hypogonadism), the only legal route is evaluation and prescription through a licensed clinician or TRT clinic operating within U.S. law.[10][11]
